

Invest in the Data that Drives Change

By pledging your support to HCCI, you will be investing in a commitment to better health care, where cost is no longer the defining factor governing access to quality, affordable, and equitable care. Fund the future of care by investing in the Health Care Cost Institute.

Contribute to HCCI's mission. As a small non-partisan, non-profit organization, HCCI relies on the support of partners like you to help promote a substantive, data-based discussion around healthcare costs. By pledging your support to HCCI, you will be investing in a commitment to better health care, including reducing cost barriers to quality, affordable, and equitable care.

Support our public research. HCCI produces high-quality reports and policy briefs that lead to meaningful, measurable change. Your support helps us reach the people who matter: decision-makers, thought leaders, information amplifiers, and other stakeholders who shape the conversation and ignite change.

Spotlight a specific issue. In addition to our flagship publications, such as the annual Health Care Cost and Utilization Report, HCCI regularly produces reports on specific health policy topics, including women's health, primary care, children's health care, and low-value care. Work with us on a deep dive into an issue important to you, to generate the impact you need.

Provide data access to an eligible researcher. Qualified academic and policy researchers can license HCCI's world-class commercial claims dataset for use in answering their own health policy questions. We view this licensing as an opportunity to multiply the impact of our own work through the efforts of experts across the country and around the world. You can help facilitate access by eliminating research cost barriers, either by funding a researcher directly or by contributing to a data access fellowship fund housed and administered by HCCI.

Receive Medicaid and Medicare data analysis. HCCI has access to Medicaid and Medicare data that CMS makes available to product innovators; data that contains clues on how you can make the health care system work better. For example, we can use government data to provide insights on spending and use of particular services or types of care, quality of care, provider profiling, or value-based payment. And unlike work that draws on commercial claims dataset, reports we create for you from Medicaid and Medicare data do not need to be made public.

Glean insights from your claims data. Health care claims data is the most comprehensive source of real-world evidence available to researchers – the gold standard for timely, population-level information. HCCI can help you unlock the valuable information buried deep within the numbers: analyzing your claims data ourselves, providing training and technical assistance to others, or expanding our existing multi-payer claims database with your records.

Leverage our expertise. The HCCI team has a unique blend of data, analytics, and policy experience available to help you solve your organizational challenges and achieve your vision. From conceptualizing a project through planning, research design, and analysis, our team knows how to combine strategic thinking with evidence and information, to help you answer your big questions, put data into context, formulate policy, and understand the impacts of various policy options. We also can even partner with you to assess/test/peer-review your own analysis and results.

Contact Katie Martin, CEO & President of the Health Care Cost Institute, at kmartin@healthcostinstitute.org to discuss how your partnership with HCCI can impact the future of health care.
